

## Private Label Software

As part of our ongoing support for our customers, we can provide our patent pending software as a private label version. This is a version that does not show our company information or company logo, but shows yours. You get to name the program, display your logo, customize it for your colors and your defaults, and in general, market and sell a program that comes from your company as if you wrote it.

Private Labeling allows you to market our products as your own. By re-branding the product, you can charge whatever makes sense for your project - without worrying about being competitive with our prices. Your brand will make yourself the only point of origin for all the products and services you offer.

Complete rebranding removes ANY mention of iVisionMobile or even the original name of the product. Private Labeling is available with two levels:

### **Small Business - \$500/month\***

Package Includes:

- Private label messaging software with company logo across the public website and client portal
- 4-hour sales consultation with an iVisionMobile representative
- Outbound and Inbound messages billed at a reduced rate.

### **Developer's License - \$3,000/month\***

Package Includes:

- Access to iVisionMobile Development team for technical support on custom development projects
- Client registration form linked to your private label account
- Managed server with dedicated random short code for mobile campaigns
- Private label messaging software with company logo across the public website and client portal
- 4-hour sales consultation with an iVisionMobile representative
- Outbound and Inbound messages billed at a reduced rate

**\*12-month contract term required.**
